WINEGROWING REGIONS OF SLOVENIA

Slovenia lies in an ideal climate zone: between 45 ° 30'N and 47 °N, with the Adriatic Sea as a part of its western border.

The Alps form Slovenia's northern border - these shield the land from the harshest of northern weather and also moderate the intense continental summer heat. The southern slopes of the Alps and their rolling foothills offer a large number of good viticultural sites that are grouped into three viticultural regions differing in microclimate, soil composition and viticultural tradition: Podravje, Posavje and Primorje. With such a wide variety of ampelographic conditions, Slovene viticulturists have been able to apply and customize vines, winegrowing, and methods of making wine from all parts of Europe.

The taste and bouquet of Slovene wines range from heavy Bordeaux-style blended red wines to the aromatic white wines of the Mosel and Rhine valleys, from the dry wines of Italy to the sweet varieties offered by Hungary, from the heavy port and sherry of Spain and Portugal to the light and subtle wines of Champagne and Alsace-Lorraine. A number of local varieties grown nowhere else have also been developed during Slovenia's long viticultural history.
